PROTECT YOUR DATA FROM FOREIGN POLICY

Whilst some hyperscaler cloud providers can deliver assurances around data residency, these assurances can't be extended to data jurisdiction.

You need to ensure that data is subject to only the jurisdictional laws, controls and authority of the United Kingdom, where your data is collected and resides.

To be sure your data is subjected to United Kingdom local data law, you need a sovereign cloud provider to sit alongside your existing technology stack.

UKCloud offers a **sovereign cloud platform** that follows these principles:

Data Sovereignty and Jurisdictional Control

Data Access and Integrity

Data Security and Compliance

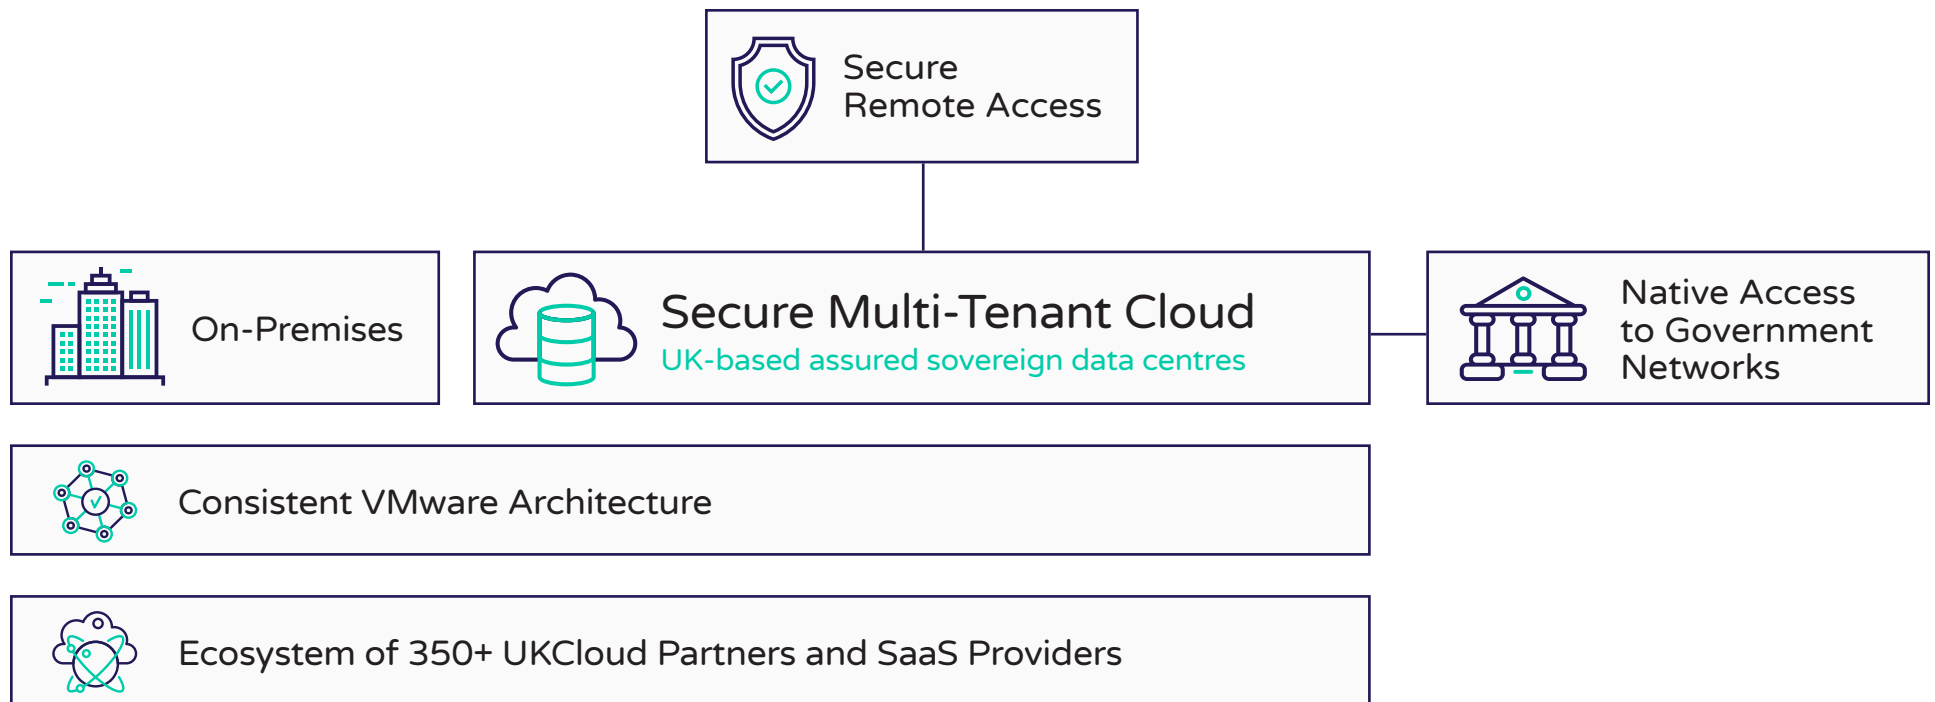

Data Independence and Mobility

Sovereign Cloud from UKCloud	Sovereign Cloud Features	Why VMware	3 Flavors of Sovereign Cloud	Security	Why UKCloud	Getting Started
--	--	----------------------------	--	--------------------------	-----------------------------	---------------------------------

Engineered to meet the uncompromising security and regulatory requirements of critical and sensitive systems in government, healthcare and defense.

UKCloud specialise in secure, flexible, cost-effective cloud—powered by VMware and running in Ark Data Centres within the UK governments Crown Campus —that underpins digital transformation and regulatory compliance for the public sector. With a VMware architecture, customers can expect a consistent experience that spans the edge, on-premises, private cloud, and secure, hosted multi-tenant sovereign cloud.

UKCLOUD SOVEREIGN FEATURES

UKCloud's sovereign cloud helps you:

Increase Security

- Implement security controls in the cloud more quickly and effectively
- Secure data and workloads against rapidly changing attack vectors

Maintain Compliance

- Achieve compliance significantly faster and more efficiently
- Demonstrate compliance on an ongoing basis

Improve Control

- Ensure visibility and auditing of all cloud administration activities
- Prevent unauthorised or authorised access to data by foreign entities

Unlock Data

- Share and extend data with trusted companies or clouds within jurisdiction of the UK national data strategy
- Leverage UKCloud's data services for data insights and data integrity

Future Proof

- Avoid vendor and cloud lock-in
- Sovereign Cloud protects against changing regulations, security threats and geopolitical impacts

Fuel Economic Innovation

- Support national and sovereign digital capability
- Pool national data to unlock economic innovation and growth

UKCLOUD SOVEREIGN FEATURES

WHY A VMWARE POWERED SOVEREIGN CLOUD

Clean Migration

Leverage your existing VMware investments—some apps needn't be refactored to move to our VMware cloud

Managed or Self-Service

Self-service virtual Infrastructure, Networking, Security, Applications, Disaster Recovery, Migration, Backup services and more

Buy What You Need

Only pay for what you need with completely flexible cloud compute at your fingertips

Familiar Environment

Leverage existing VMware skill sets and ramp up quickly on VMware powered cloud and services

Portability

Consistent VMware architecture enables workload portability and mobility between clouds and datacenters

Greater Elasticity

Provision new resources seamlessly in minutes and handle peaks and seasonality with ease

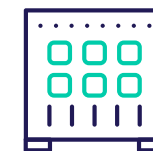

More Control

Control your cloud experience with automated infrastructure, storage, security, networking and more

Modernize Applications

Modernize apps further with Tanzu Kubernetes and Dev Ready Cloud services

Choice of Storage

Robust, flexible storage options to meet different demands

UKCLOUD VERTICALS

UKCloud

- Delivering more choice and more cloud options
- Providing high assurance and secure connectivity
- Accelerating public sector digitisation with sovereign cloud expertise
- Able to support direct customers and partners with sovereign cloud requirements

UKCloud Health

- Proven, comprehensive assurance regime for NHS data
- Unparalleled expertise to enable digital healthcare
- Reduce risk, time, cost of advancing digital maturity
- Partner with HealthTech innovators

UKCloudX

- UK's first high assurance cloud platform
- The only UK sovereign Strategic Cloud Provider with government-approved secure facilities and security cleared staff
- Dedicated to helping the defence industry realise the true potential of cloud-based technologies

Getting Started

SECURE BY DESIGN

Starting Your Journey

Cyber protection and management starts by having a detailed understanding of your security posture. When you start your cyber journey, you need to carry out an application assessment to gather an end-to-end view of your organisation's IT landscape.

Maturing Your Capability

In order to defend your organisation from cyber attacks, it's important to identify potential attacks before they happen. Once you have sight of the crucial information – and have established processes in place – this will speed up data interpretation and threat resolution times.

Becoming World-Class

The final stage of your cyber journey is all about root cause analysis. Here we need to develop a detailed understanding of what happened and where – which can include forensic investigation.

WHY UKCLOUD

The leading sovereign cloud provider in the UK

The first **UK Certified Carbon Neutral** cloud service

The only sovereign cloud provider recognised as a **Strategic Cloud Provider to the UK government**

The first UK tech company to be awarded the **Social Value Quality Mark Level 2**, generating £1.43 of value to the UK economy for every £1 spent.

“We needed a solution that would provide security, assurance and UK sovereignty, while also giving us the ability to scale our services. UKCloud Health ticked all the boxes.

Michael Shenouda
Medical Director, Open Medical Ltd
