

“WE CAN ENGAGE WITH UKCLOUD AND ENSURE SOLUTIONS ARE OPTIMISED FOR A COMMUNITY OR A CUSTOMER. THAT WOULDN'T BE POSSIBLE WITH A BIG PUBLIC CLOUD PROVIDER.”

Jeremy Humphrey,
Technology Practice Director, Roc Technologies

Who is Roc Technologies?

Sector: Technology services provider

Headquarters: Newbury, Berkshire

Roc Technologies is a fast-growing UK-based transformation services provider. It empowers organisations to accelerate business and technology change.

POWER TRANSFORMATION IN THE JUSTICE COMMUNITY

One nation justice. Transforming rehabilitation. These and other government transformation initiatives are driving change across the justice community. All too often, however, legacy IT infrastructures stifle innovation.

That's why organisations turn to Roc Technologies. They want to meet transformation objectives with efficient digital services. They want help to make the move to flexible, scalable and cost-effective cloud platforms.

The main challenges organisations in the justice community must deal with on their transformation journey are:

- Maintaining security and protection for sensitive data
- Ensuring access to services using government networks as well as via the internet
- A lack of flexibility on the part of big public cloud providers

SERVICES

Sovereignty and security

Standardisation tempered by flexibility

Connectivity to government networks

“Moving to the cloud opens up so many possibilities. Organisations can adopt agile development methodologies, and create user-centric services that support information sharing, collaboration and mobile working. It also helps to reduce IT operating costs, which is critical when budgets are flat or shrinking.”

Jeremy Humphrey,
Technology Practice Director,
Roc Technologies

A SECURE UK-BASED CLOUD

Roc partners with UKCloud to support its work with organisations in the justice community and wider public sector.

Why UKCloud? It solves the thorny issue of data protection. Most justice community projects involve data assets that are too sensitive to be stored outside the UK.

“UKCloud is a safe pair of hands, as all of their services are delivered from within the UK,” says Jeremy Humphrey, Technology Practice Director at Roc. “As well as being highly secure, UKCloud’s platform is accredited for OFFICIAL and OFFICIAL SENSITIVE workloads, and is connected to government networks.”

STANDARDISATION COMBINED WITH FLEXIBILITY

Roc is supporting organisations in the justice community as they work to meet government transformation initiatives. It’s helping them improve performance by:

- Increasing process efficiency
- Migrating case management systems, secure email and other end-user computing applications from legacy to cloud infrastructure
- Enabling the mobile working strategies that make community-based delivery of services a reality

Humphrey likes the way UKCloud combines the benefits of a standardised platform with a degree of flexibility. “That means we can engage with UKCloud and ensure solutions are optimised for a community or a customer – something that wouldn’t be possible with a big public cloud provider.”

Business benefits:

- **Protection for sensitive data**

UKCloud’s assured, UK-based cloud platform enables compliance with data protection requirements

- **Access via government networks**

UKCloud’s connectivity to government networks meet the justice community’s application access needs

- **Delivering transformation**

Roc and UKCloud work together to support justice community organisations on their journey to the cloud
