ukcloud X

Transforming the Mission

UK Sovereign High Assurance cloud services designed for our nation's most sensitive and mission critical systems.

UKCloudX exclusively serves the community of Defence, Intelligence, Security and Law Enforcement agencies in the UK with a shared mission to keep our nation safe by developing our national capability and enhancing our collective productivity and efficiency.

We provide UK owned-and-operated multi-cloud services that deliver unparalleled choice of technology and deployment, choice of assurance levels (including higher classification) and secure connectivity options and expert support throughout your entire project lifecycle.

We are experts in helping organisations in secure and regulated environments benefit from the cloud. But we also understand the reality of diverse technical requirements, challenges with interoperability with existing systems and your need for access to skilled and experienced experts that can help you extract the real value of new technology.

"We believe there is a benefit in modernising the systems and platforms that are used to support requirements that are classified above 'OFFICIAL'", said Danny Wootton, ISS Hd Innovation, UK Ministry of Defence. "I fully support the intent of bringing the agility, cost-effectiveness and rich functionality of a High Assurance cloud platform to projects operating at higher classification levels."

Together enhancing the UK's national security

"We believe UKCloudX will add an extra dimension to the highly secure solutions that we deliver to the Defence and National Security sector"
Matt Franklin, CEO at Roc.

"We welcome UKCloudX's investment in delivering the UK's first High Assurance cloud platform from within our datacentre facilities. Our dedicated campus approach delivers security without compromise"

Huw Owen, CEO at Ark Data Centres

We keep our nation safe and help Defence & National Security organisations to:

- Innovate through experimentation

- Drive new insights through secure collaboration

- Drive cohesion through more effective and efficient IT services.

- Solve complex and sensitive challenges

- Transform the mission by turning user needs into deliverables at scale.

- Deliver critical systems within our UK sovereign platform, adjacent to Crown Hosting with security cleared staff
