

Wouldn't it be nice if you could make one choice and instantly your data would be better protected?

Well actually you can

Making the right choice as PSN becomes unviable, when the threat landscape changes, when cost pressures and operational accessibility drive more data into the cloud is critical and yet, not intuitive, especially when Cyber Security is not your core business

But you can make one choice that will increase your success

Who you partner with.

 &  recognise this and have joined forces to provide you with a better choice

We provide Cloud SOC & Protective monitoring services that are designed to protect your data wherever it is

Our solution is evergreen, changing ahead of the threat, simple to deploy and manage and reduces your dependency on other technologies, simplifying your estate and reducing unnecessary cost, our team are experts in their field and can apply that expertise to your challenge

All you need to do is make that choice

Moving services and data into the cloud is the new normal, organisations know that the advantage it gives makes the move unavoidable BUT you may be about to increase the Attack Surface of your organisation...

ukcloudX & **92e** recognise your challenge

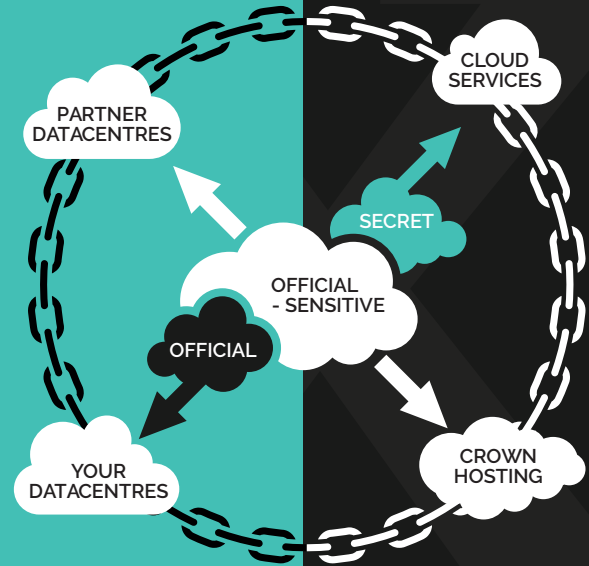

which is why a market leading cloud provider and a market leading SOC and protective monitoring provider have come together to help you:

**No matter what type of data
No matter where it is**

Come and answer the questions below, so we can help you define the solution you need:

- What do you want to monitor?
- How are your assets connected?
- What level of coverage do you need?
- What classification is the data you are handling?
- What level of support do you need?

Targeting the right solution for your organisation starts by ticking a few boxes
– allowing us to engage with you appropriately and help you define and cost the right solution.
