

## SUMMARY OF SOCIAL VALUE

As a strategic supplier for multi-cloud services to government, UKCloud is delighted to be able to offer our award winning services to public sector organisations at a discounted rate. We stand ready to help to stretch IT budgets across the nation and to ultimately much greater value for money to UK taxpayers. But the benefits don't end there...

This Memorandum of Understanding (MoU) provided the opportunity for UKCloud to demonstrate our commitment to creating sustainable social value. We are privileged to play an active role in improving the front line public services used by many UK citizens and believe that the key to restarting our national economy is to focus on improving our local communities through the creation of new jobs, skills and businesses. Here are a few of the highlights:

### 1. NURTURING ESSENTIAL DIGITAL SKILLS

We support the economy by nurturing essential digital skills through undergraduate placements, apprenticeships and supporting ex-services personnel under the Armed Forces Covenant.

### 2. NO TAX AVOIDANCE

Unlike some global technology corporations, as a UK sovereign business we are committed to contributing our fair share towards the funding of public services.

### 3. SUPPORTING BRITISH BUSINESSES

UKCloud powers more than 300 tech businesses to deliver their innovative solutions into public sector. This drives the creation of new jobs and skills in a high-growth sector, and it accelerates the adoption of digital technologies to improve public services.

### 4. SUSTAINABLE CARBON NEGATIVE SERVICES

We've been a certified Carbon Neutral provider since 2011 – and with this MoU we've formalised our commitment to go one step further by becoming the first strategic cloud provider to support the Sustainable Technology strategy by delivery carbon negative cloud services.

### 5. ZERO EXIT CHARGES

We believe that our public sector data is a national asset. Cloud enables new insights through easier analysis and sharing – yet the common practice of charging for egress and data access can make this cost prohibitive. UKCloud is committed to retaining free access to your data.
